Abstract

Abstracts appearing in this section are prepared by the American Psychological Association, 750 First Street, N.E., Washington, D.C. 20002.

1. *Principio de la conservación de la energía*
 La energía no se crea ni se destruye, solo se transforma.

the magnetic resonance (MR) technique
and a series of experiments.

Amongst numerous MR techniques,
ultrashort echo time (UTE) MR is
one of the most useful methods. Ultrashort
echo times are used to acquire signals
from tissues with very short T₂ relaxation
times, such as cortical bone. However, the
signal-to-noise ratio (SNR) of UTE MR
images is low due to the short T₂ relaxation
times of the tissues. This is because the
signal decays rapidly during the acquisition
time. To improve the SNR of UTE MR
images, several methods have been proposed,
including the use of parallel imaging techniques,
compressed sensing, and deep learning.
In this paper, we propose a new method
for improving the SNR of UTE MR images
using a deep learning approach. Our method
is based on a convolutional neural network
(CNN) architecture. The input to the CNN
is a set of UTE MR images. The CNN
consists of several layers of convolutional
filters, followed by a fully connected layer.
The output of the CNN is a set of UTE MR
images with improved SNR. We evaluate
our method using a series of experiments.
The results show that our method improves
the SNR of UTE MR images significantly.
Our method is simple and easy to implement,
and it can be applied to a wide range of
UTE MR images. This makes our method
a promising tool for improving the SNR of
UTE MR images.

The corporate managers (CFO) will have
access to accounting and audit.
